
Application Note #1141:
CF Card Compatibility - GP2000 and AGP3000 Series

Introduction

This application note explains general guidelines for determining CompactFlash™ (CF) Card compatibility with the Pro-face GP2000, GLC2000 and AGP3000 Series products.

Pro-face CF Card Interface

The CF Card interface on the GP2000, GLC2000 and AGP3000 series supports CompactFlash™ cards that operate at 3.3V. CF Cards that only operate at 5V cannot be used. The CF Cards mentioned in the document have an auto sensing 3.3V / 5V switch that allows their use in Pro-face hardware.

Recommended CF Cards

Pro-face recommends using Pro-face brand CF Cards. The following cards are available:

- | | |
|---------------------|--------------------------|
| CA3-CFCALL/256MB-01 | 256MB Compact Flash card |
| CA3-CFCALL/512MB-01 | 512MB Compact Flash card |
| CA6-CFCALL/1GB-01 | 1GB Compact Flash card |

Compatible CF Cards

If a Pro-face brand CF Card is not available certain SanDisk brand CF Cards have been tested and confirmed to work with the GP2000, GLC2000 and AGP3000 hardware. Note that Pro-face cannot guarantee functionality when 3rd party hardware is used. In rare cases problems with 3rd party cards have surfaced after months of operation.

When selecting a SanDisk brand card make sure to select the “Standard” style cards and not the newer “Professional” cards.

Compatible “Standard”

Not Compatible “Professional”
